```java
class Addition
{
        static int sum=0;
        public static void add(int...k) // variable length argument..
        {
                for(int i : k)
                {
                        sum = sum+i;
                }
                System.out.print("sum is "+sum);
        }
}
class Assign13
{
        public static void main(String[]args)
        {
                Addition.add(1,2,3,4,5,6,7,8,9,10); // calling static
method/function by class name..
        }
}
```
